

UTSA Virtual CS Main Lab Commands

The command list for the Virtual Main Lab

All parameters in angled brackets(<>) are required. Parameters in square brackets([]) are optional.

Standard Commands

- `/verifyme <abc123>,<first_name>,<last_name>`
 - Adds/readds you to your course channels
- `/tutors [schedule]`
 - List all available tutors
 - Use `schedule` to view the tutoring schedule for specific course.

Tutor Commands

- `/tutor <in|out> ["message in quotes"]`
 - Use this command to clock in or out
 - Pass in a message in quotes to be broadcasted to all channels you tutor.
 - * Ex: `/tutor in "I'll be available until 8:00!"`
 - * **Note:** You cannot use quotes inside your message.

Admin Commands

- `/updatecourse [all]`
 - Update course list and automatically remove/add students in course (If student is already verified)
 - Pass in the `all` parameter to update all course channels. Otherwise it will only update course the command was ran in.
 - **Note:** This command may take awhile
- `/updatelist [force_verify]`
 - Update backend list without altering channels
 - Pass in the `reset` parameter to remove Slack `user_ids` associated with members
- `/removeroles`
 - Removes the roles from all users
- `/removecourses [stay]`
 - Removes all course channels
 - The `stay` parameter will keep all admins inside the channel. Without this parameter, everyone including admins will be removed.
 - **Note:** This command may take awhile
- `/resetuser <abc123>`
 - Remove the Slack `user_id` from specified member.
 - Use this to open member for verification.
 - * For example, if someone verified as another person
- `/update [install]`
 - Use this to check for updates or install updates
 - Use `/update` by itself to check how many updates the bot is behind
 - Use `/update install` to install new update and restart bot
